

Integrations Solutions Management PTY LTD

Trading as MYSKILLSmanager and MYSKILLS Services

Information FACT SHEET

About

MYSKILLSmanager and MYSKILLS services have recently finalised their “Cloud Technology” and associated support systems and services, designed to deliver advanced quality management processes. The MYSKILLSmanager processes now align to the revolutionary, global business management models.

Technology advances have resulted in the promotion of a new industrial revolution. It is referred to as the fourth industrial revolution or Industry 4.0 - Quality 4.0 is a term that references the future of quality and organisational excellence within the context of industry 4.0.

The application of Industry 4.0 digital technologies to quality management defines the future however globally, few have launched a program to implement it.

Industry and Quality 4.0 outcomes can now be delivered through the MYSKILLSmanager, Universal, Quality 4.0 Management Framework.

Call it good luck or put it down to the massive amount of preparation conducted by the Queanbeyan company has resulted in the locally created business solution converging, in 2022, with the transformational Quality 4.0 principles. This translates into MYSKILLSmanager and MYSKILLS Services providing revolutionary global business leadership.

Having this capability has led to knowing how to inspire complex and sustainable change, creating company growth, building a competitive advantage through fostering a culture in which employees take ownership of quality as a key feature of performing their job role.

Technology is critical to enabling Industry 4.0 however it is only one element in a broader quality

transformation. Implementation of industry 4.0 depends on engaging and empowering people with the right skills to perform their job roles.

A feature of this transformation business model is helping any size business, implement practical and sustainable quality management processes. Including understanding how company decisions affect people: lives, relationships, communities, well-being, health, and society in general.

The realities are the majority of businesses do not have a culture of excellence or the focus on delivering quality products and services that is understood or is easily explained.

Using technology simplifies the change process through continual lifelong learning and performance improvements. People using smart phone technology is a good example of how people have adapted to change in recent times.

The issues of productivity and skills shortages are fuelling a merry - go - round of activities throughout the country without people knowing or understanding if the current support strategies actually work or are required into the future.

Australian businesses have been struggling to survive the impact of covid and climate.

People have for some time now been challenging the idea of a life career and are now demanding a better work life balance.

Hopefully, people will see there is a light at the end of the tunnel. A light generated MYSKILLS manager and MYSKILLS Services
